

Canonical dimension of a finite subgroup of a Brauer group

NIKITA KARPENKO

Symposium, Basel, December 17, 2009

Let p be a prime integer. We compute the canonical dimension at p of an arbitrary finite subgroup of the Brauer group of a field. This result is used to determine the essential dimension at p (over a field of characteristic different from p) of an arbitrary finite group. We also discuss possible generalizations of the above result.
